

Week 1 Lab exercise

1. Use our HTML template to create a file named as your name (for example if your name is John the file name would be "john.html"). Make sure to update the meta data (title, author, description...) accordingly.
2. H1 element that shows your full name and student number
3. Embed `<script>` tags in the body of your HTML and JavaScript statements to perform following:
 - a. A variable that contains your first name
 - b. A variable that contains your last name
 - c. A variable that contains your age
 - d. An alert dialog box that displays your full name (using value of variables declared above) as shown below:

4. A `console.log()` statement that displays your name and age
5. Finally try to move your JavaScript code to an external .js file and link it to your HTML file. Test to ensure everything still work as before.
6. Please upload both your files (.js and .html) to the following directory in your GBLearn account:

public_html/comp1231/lab/practices/wk1/

Please note, your work will not be graded if:

- your GBLearn account has not been activated and set by week 2 ([instructions available on Blackboard](#)).

OR

- you have not added your instructors to your account via <http://my.gblearn.com> by week 2

OR

- your HTML page does not include the validation script and or it does not pass the HTML5 validation test.

OR

- your directory/file is not named exactly as specified above (lowercase without any spaces)
